Subject: ART In-well Air Stripping Technology

Dear Dr. Odah;

I am writing this letter to express my appreciation for your firm's assistance with the cleanup of a tanker-spill in California. As you know, the accident had the potential to impact both an adjacent waterway and a nearby well. Because of the quick response, using your technology, we have successfully contained the dissolved plume and have reduced concentrations to levels nearing our closure criteria.

I am very satisfied with the results obtained on this site. I have found your technology both low maintenance and effective. ART's prompt response to questions and continued follow-up/assistance on the project are also appreciated. I am certain we will have the chance to work on additional projects in the future.

Thank you again for your help.

Respectfully,

Donald F. Kidd, P.E.  
Principal Engineer/Project Manager
